

Figure 1 - Antenna kit and bagged kit

The Lencom® 02-2181 long-wire antenna kit is designed to extend the efficiency of Lencom automatic tuners antennas when a vehicle is stationary

Product Information

It is designed to easily attach to most mobile tuners as well as Lencom's 02-4010 NATO base 3m whip, the 02-4024 flange mount base and the 02-4022 single hole base.

It simply slides over the stud at the top of the antenna base and is held firmly in place with the captive retainer.

The extra radiating length improves performance on both transmit and receive.

It comes complete in one bag and comprises 9 metres of Kevlar wire rope, 20m of UV resistant cord, a captive weight for throwing the antenna over a support structure or tree, plus a winding frame.
