Data Sheet

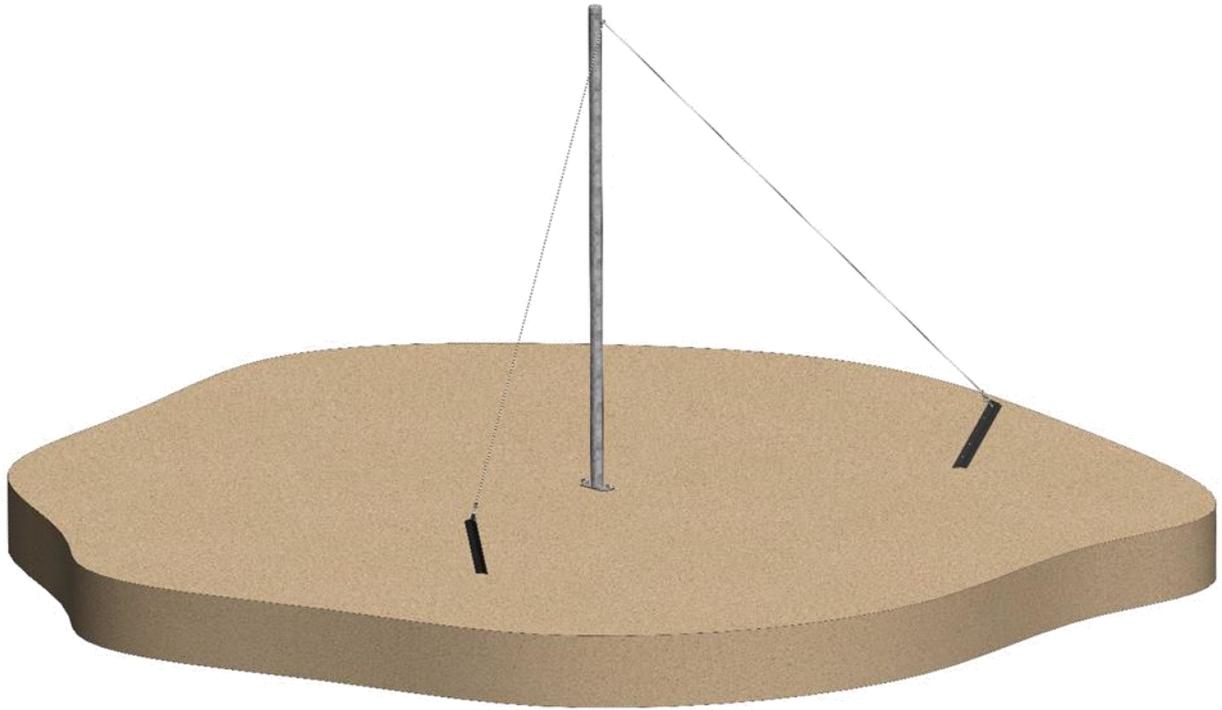

Figure 1 – Stub Mast Installed

The Lencom® 01-1012 stub mast was designed to support HF antenna element ends. The mast comes with a complete kit and is easily installed and transported.

The stub mast includes the mast, pegs, guys and anchors.

Lencom manufactures a large range of HF antennas - please enquire.

### Product Information

2 metres in height, they are held in place by pegs through the welded base plate, and wire rope guys to the anchors.

The antenna is attached to a closed hook on one side of the mast, and the guys to a closed hook on the other side.

Lencom can provide a range of masts for antenna installations.

The standard mast range include 9m, 12m and 15m masts.

The 10m lightweight range provides for erection by one person.

The tactical range covers 6m and 10m masts designed for rapid deployment.
