

Figure 1 – 4010 exploded and assembly view

The Lencom® 4010 HF whip is designed to be used with an Automatic Antenna Tuning Unit (ATU), such as the Lencom 4002 and 4006 ATUs.

It is suitable for mounting on any horizontal, flat surface.

It can be supplied with any hole pattern base.

### Product Information

The 4010 is extremely rugged and meets MIL-STD 810 and Australian Defence Standard DEF-STAN 00-35.

The antenna can be flexed to 90° from the vertical with no damage caused to the base unit and whip antenna. A tie-down kit is supplied for Near Vertical Incidence Skywave (NVIS) operation.

In addition, an extension kit is available to take the total whip length to 6.9m, increasing antenna efficiency at the lower frequencies. The extension kit is for stationary use only. The optional 9m long wire antenna kit improves efficiency of the antenna if fitted in lieu of the standard whip, when stationary
