

# HF Long Wire Antenna LB022

Data Sheet

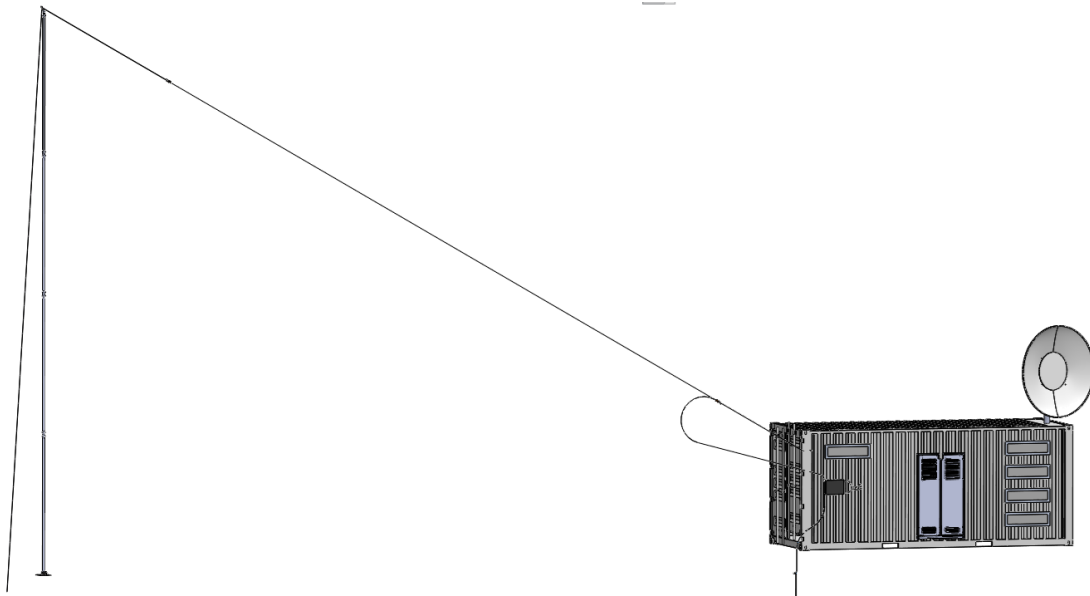

Figure 1 – Installed LB022 Antenna

The Lencom® LB022 is the ideal antenna for any HF Antenna Tuning Unit that can tune a 20m wire, such as the Lencom® Base Tuner 5200.

Constructed of stainless-steel wire rope and UV stable rope, the LB022 is a rugged and versatile antenna that is:

Suitable for either permanent or portable operation, extremely compact and light, and easily and quickly deployable by a single person.

## Product Information

The LB022 can be deployed rapidly in the field, and suits permanent installations where space is limited.

Any suitable structure or tree can be utilised for support and the kit includes a rope and pulley for ease of installation.

The antenna is supplied ready to install, with a lug at the transceiver end and a 25m length of rope attached to the insulator at the end of the antenna, allowing it to be deployed as high as possible for the best results.

An earth wire is included in the kit to facilitate grounding.
