

HF Long Wire Antenna LB022

AT A GLANCE

Permanent or portable operation

Extremely light

One person erection

Rapid deployment

Short package designed for air transport

Perfect for rapid deployment needs

The Lencom® LB022 is the ideal antenna for any HF Antenna Tuning Unit that can tune a 20m wire.

It can be deployed rapidly in the field, and suits permanent installations where space is limited.

Any suitable structure or tree can be utilised for support, and the kit includes a rope and pulley for support at the far end.

The antenna is supplied ready to install, with a lug at the radio end, and a 25m length of rope attached to the insulator at the end of the antenna, allowing it to be deployed as high as possible.

An earth wire is included.

Constructed of stainless steel wire rope and UV stable polypropylene rope, the LB022 is a rugged, but flexible antenna.
